

# 2024 Herbaceous Cultivar Trial Results

## Chadwick Arboretum

### The Ohio State University, Columbus OH

Pamela J. Bennett, Professor, Extension Educator, Horticulture, Clark County

#### Introduction

The Cultivar Trials at The Ohio State University are located on the campus of the College of Food, Agriculture, and Environmental Sciences in the Chadwick Arboretum and Learning Gardens. Faculty and staff worked with Chadwick volunteers and Franklin County Master Gardener Volunteers (MGV) to implement the trials. Chadwick horticulturist Anna Williamson was responsible for growing the plants and working with volunteers to manage the trials. Julia Wilson, program manager, organized the volunteer workdays. Volunteers planted seeds and plugs and maintained plants in the greenhouse, planted the trial beds, weeded, and assisted with the evaluation of the plots. The objective of the trials is to observe the performance of new and recently introduced annual cultivars under the environmental conditions of central Ohio.

The plots have loamy, well-drained soil and have had compost added each year of the trial. The beds were tilled prior to planting. Shade plants were in raised beds containing a soilless mix; shade cloth was provided for shade.

The selection of plants to be trialed in the garden varies from year to year. The selection is based on entries from companies. The results of performance for the plants are based on the data collected at the plots. The data reflects the growing conditions of 2024 in Columbus, Ohio. The purpose of the evaluation is to provide growers, landscapers, and homeowners with a tool for plant selection for the Midwest as well as to provide performance data to the breeders and companies.

#### Method

The plants were started in the greenhouse from seeds or plugs, depending on the species, according to the recommended starting dates. They were planted in the ground plots and the raised beds on May 17, 2024. There were six plants of each variety in a block; most plants were spaced on two-foot centers with the trailing/vining plants planted on four-foot centers in the block. *Calibrachoa* and mixed cultivars were planted in 18" diameter containers, six plants per container, and in a soilless mix (noted below with an \*).

A 14-14-14 slow-release fertilizer was incorporated into the soil as well as the containers before planting at the labeled rate (one tablespoon per four-inch plant). No additional application of fertilizer was made to plants in the ground. A new irrigation system was installed in spring 2023 and was not functioning in the beginning of the season due to a parking lot renovation. Plants were watered by hand. Once the irrigation was working, it was used to ensure that plants had approximately one inch of water per week. Unfortunately, there was another problem with it and watering during the driest period of summer was limited. Therefore, the final resulting evaluation number does not include a September rating as it has in the past. See the weather information below for additional details. In-ground and raised beds were mulched before planting. Hand weeding was completed as needed.

All plants were grown in full sun unless otherwise indicated with a shaded row in the chart below. ***The plants in these trials were deadheaded on a regular basis by volunteers and staff.***

Faculty, staff, and volunteers conducted visual evaluations on June 26<sup>th</sup>, July 24<sup>th</sup>, and August 21<sup>st</sup>. The entire block of plants received a visual rating from one to five. A rating of five was excellent and a rating of one was poor. The individual evaluation ratings were averaged for the monthly rating figure. The monthly evaluations (June-September) were averaged for the final rating for each variety.

The plants were rated in September, but the September rating was not included in the final average due to the drought. Plants were rated based on their appearance after going through the drought. Plants that received a \*\* in the table below were those that received a 4 or higher rating in September.

**Weather Information**

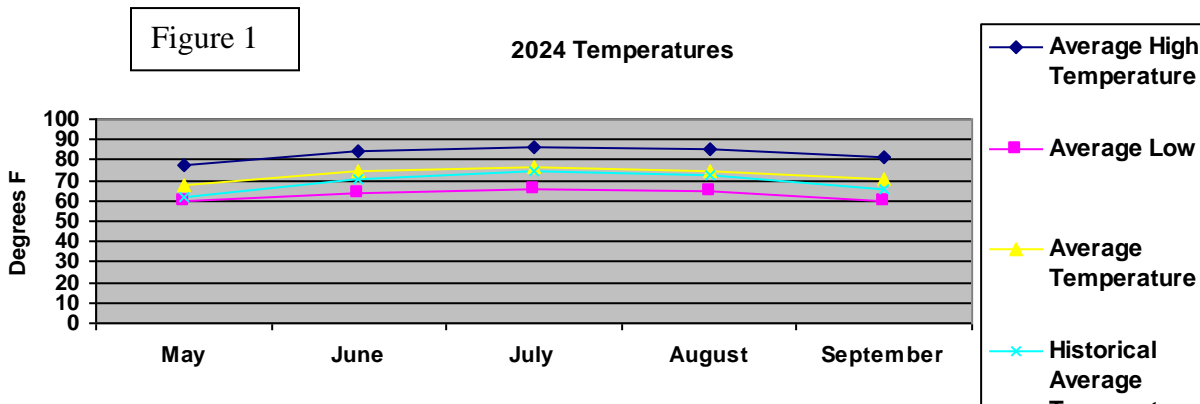

The information below was obtained from the College of Food, Agricultural, and Environmental Sciences weather station in Columbus, Ohio. More details can be found at:

<https://weather.cfaes.osu.edu/stationinfo.asp?id=14>

May was warm and dry, with perfect planting conditions. Average temperatures were above historical average temperatures throughout the growing season; May 6.4, June 4.1, July 4.2, August 2.4, and September 4.3 degrees F above historical average temperatures. In addition, rainfall was below normal precipitation for each month with significant differences in June, July and August (-2.83, -2.49 and -2.04 inches respectively).

In 2024, immediately after planting there were six straight days over 80F. In addition, in 2024 there were 25 days of 90F or greater, and 7 days between 80.0 and 89.0F. In 2023 there only three days of 90F or higher, in 2022 there were nine days which is comparable to the number of days above 90F in 2021. Overall, it was a warm and dry growing season.

Figure 1 indicates temperature conditions and Figure 2 indicates rainfall amounts for this growing season.

**Results**

Following are the varieties in the 2024 field trials and their monthly ratings and final rating. The plants listed that are shaded gray are those varieties that were grown in shade. The plants with an \* (asterisk) after the Genus/Common Name were grown in containers with six plants per container. The plants with a double \*\* were those that had a 4 or greater evaluation number in September.

The supplier for each variety is listed in the table; the supplier key is at the end under companies. The plants are listed in order of Final Rating from highest to lowest. A rating of five is the highest; a rating of one is the lowest.

Genus/ Common Name	Series	Variety/Color	Company	June	July	August	September	Overall Average
Ipomoea	Sweet Caroline Upside	Black Coffee	PW	4.92	5.00	4.95	4.96	4.96

### Companies

Ball = Ball Horticulture (Includes Ball FloraPlant, Ball Ingenuity, PanAmerican Seed)

Dum = Dummen Orange

GC = GardenChoice

PW = Proven Winners

SAK = Sakata

### Thank You

Thank you to all the companies who participated in the trials in 2023. Thank you to Cultivate 23 for providing buses for attendees to visit the campus trials. More than 300 people attended the open house. A special thanks to our volunteers who assisted with a variety of tasks in these trials. Their dedication and hard work during the growing season kept the trials in excellent condition.

Volunteers were: Kathy Krantz, Lead Organizer, Caye Aiello, Jill Alexander, Brenda Allinger, Jen Andon, Linda Bauer, Lynn Blanton, Margie Campbell, Alison Circle, Barb Dolce, Shaunessy Everett, Debbie Farynowski, Denise Fields, Ben Gantz, Lynn Giljahn, John Glacken, Loretta Graham, Jeff Harriman, Maggie Harriman, Stephanie Harrison, Jennie Hayes, Lori Kingston, Jennifer Kuehn, Suzy Levine, Patti Mikac, Christine Osterman, Susan Peck, Anne Rauck, Marianne Robinson, Debbie Roshto, Gail Walter, Marge Ward, Kathy Watson, Hope Weber, Rosie Wendt, and Carol Williams.
